**Note:** Both potassium and phosphorus are best obtained from whole foods, as supplement forms can impact kidney function or electrolyte balance if misused.

## Key Considerations:

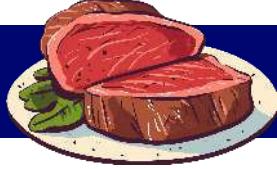

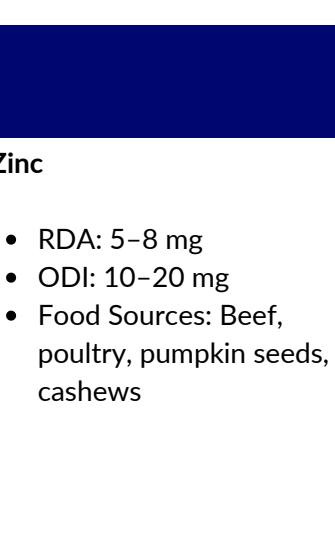

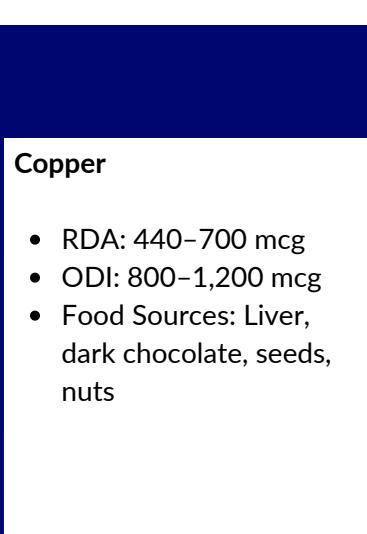

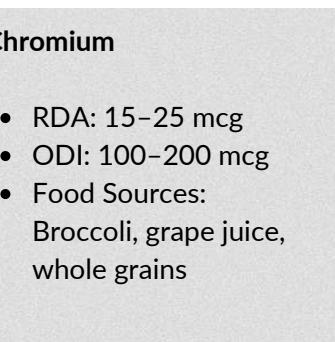

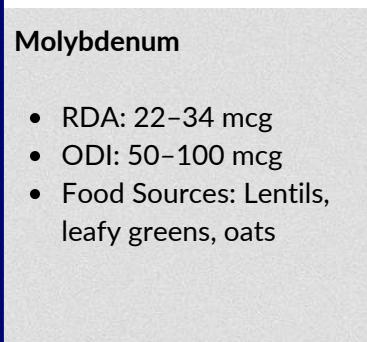

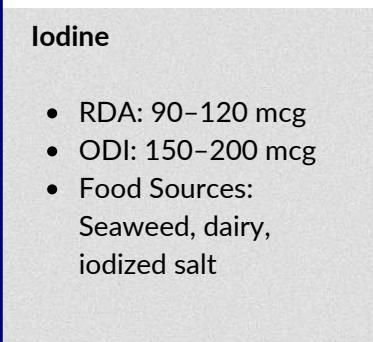

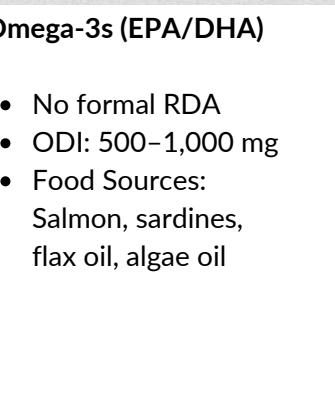

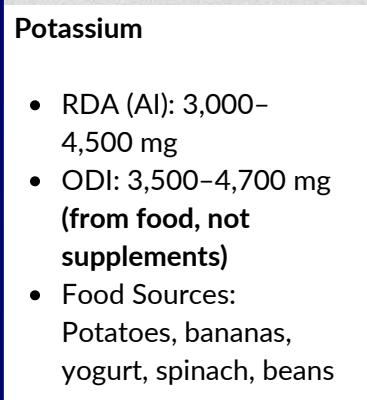

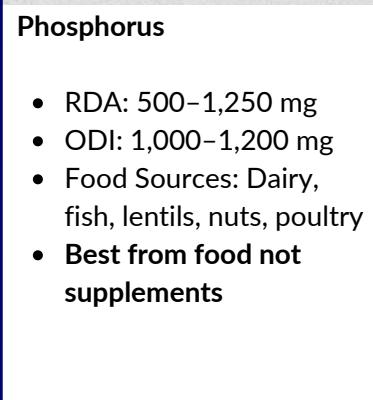

- Stress, chronic illness, pollution, medication use, and genetic polymorphisms all drive nutrient depletion beyond RDA assumptions.
- Most RDAs don't reflect synergistic nutrient relationships, like:
  - Magnesium + B6 + taurine
  - Vitamin D + K2 + magnesium
  - Iron + copper + vitamin A
- The form matters:
  - Folic acid vs. L-5-MTHF
  - Magnesium oxide (poorly absorbed) vs. glycinate/malate
